

Early Return-to-Work Program

In an effort to identify effective safety procedures, we are committed to establishing a program to investigate the causes of all work-related injuries.

In the event that an injury occurs, a program has been instituted to identify transitional positions within the organization to enable an injured employee to return to work. A return to work coordinator will be chosen to manage the development and implementation of this program.

Our goals in implementing this program are as follows:

1. Establish and maintain a stable and experienced work force.
2. Enhance the recovery process while returning the injured employee to productivity.
3. Minimize chances for re-injury.
4. Expedite prompt delivery of benefits.
5. Reduce lost work days due to injuries.
